

# Project Urban Planet

W.Tharindra Gayashika Fernando  
University of Colombo  
IJSE CMJD96

**I added the .sql database file into the project folder. Before testing the project, add it to the SQL databases as urbanproject.**

**For log as the admin, give the credentials as,**

**Username: admin-1**

**Type: admin**

**Password: 1234**

**As a user,**

**Username: user-1**

**Type: user**

**Password: 1234**

I implemented the full website with using

- ✓ Angular
- ✓ Spring boot and
- ✓ MySQL

I have added both an admin section and a user section.

Both user and admin can log to the relevant area with giving their login credentials to the website login page.

In Admin section admin can

- ✓ add users
- ✓ delete users
- ✓ view users
- ✓ add product
- ✓ delete product
- ✓ edit product details and

- ✓ view product details

In user section user can

- ✓ View product
- ✓ Filter the products using search bar or categories
- ✓ Add products to the cart
- ✓ View products in cart
- ✓ Delete added products in cart
- ✓ Clear the cart
- ✓ View the sum of all added products in cart

When I implemented this website, I set it to save images as bytes into the sql database.

So, when it is going to load, please wait around 2 seconds to load all images. 😞
